- **Tools:** Git + Github, VS Code, Unix Environments, Emacs, Unity, Adobe Photoshop, Adobe Illustrator, Adobe Premiere Pro
- Experience in graphic design (7.5+yrs.), video editing (4+yrs.), logo design (3+yrs.)

RELEVANT EXPERIENCE:

DevDogs, Frontend Programmer, Athens, GA

Oct. 2024 - Present

- Developing several frontend components through Next.js & Tailwind CSS such as “Recommended Courses” section and “Create Schedule” page to help create a web application that generates optimized course schedules for UGA students
- Currently listed as an active top 15 contributor amongst 60+ team members by using Github Desktop to collaborate with other programmers and working with the focus lead for feedback to maximize my work quality on a large-scale project
- Coordinating with UI/UX & Backend teams to ensure project cohesion by providing feedback on the user interface and connecting endpoints to display vital data
- Assisting new onboarding members of the frontend team by introducing the tools we use and their functionality

Game Builder's Club, Backend Programmer and UI Designer, Athens, GA

Sep. 2023 - Present

- Implementing numerous backend game mechanics & frontend UI functionality in Unity using C#, which ultimately helped produce 3+ fully released, creative indie games open for anyone to play
- Designing more than 30+ UI components adapted in various styles (depending on the game's theme) to effectively maintain easy interactivity and display essential information for the player
- Utilizing GitHub to frequently coordinate with at least 3-5 other programmers to ensure optimal production time and task management

CrysalisBio, Web Programmer, Columbus, GA

March 2025

- Modernized several pages (such as the home, news, and careers page) of the current website for CrysalisBio, a bioprocess technology company, through Squarespace using HTML & CSS
- Effectively worked with a client and accepted constructive feedback to maximize the quality of the webpage with the company

PROJECTS:

TuneGraph, NextJS Web App

February 2025

- Built the frontend of a data visualization web application to portray various music attributes and common trends between them through statistical graphs to provide artists/musicians a tool to understand what song attributes work for a specific audience
- Developed through NextJS & Tailwind CSS that retrieves the data from the backend and presents it through various graphs
- Gathered a diverse team of four individuals, ranging from frontend to backend developers

What The Chuck Game, Unity Game

Sep. 2024 - Dec. 2024

- Lead the development for the backend player functionality such as implementing player abilities and player interaction with the game environment in Unity using C#
- Worked alongside programmers and artists (10+) to develop a local multiplayer game, detect bugs, and help ship to Steam and Itch.io for over 200 users
- Designed 15+ vital UI elements (such as the main logo, play button, game over screen, etc)

Game Information Searcher, JavaFX Software Application

Apr. 2024 - May 2024

- Created a software application tool that allows users to search for PC games using JavaFX, which helps spotlight new games/interests through preferred filters (such as by low price or by current details) and provides 5+ currencies to view
- Utilizes external RESTful JSON APIs accessed by an HTTP client to display the information

COMMUNITY INVOLVEMENT:

Feed the Valley Bank, Volunteer, Columbus, GA

Jul. 2019 - Feb. 2023

- Packaged cans, beverages, and other goods as well as handled trash and disposables (20+ hours)
- Participated in local food drives by handing out confined goods to local communities (10+ hours)

First Lego League Robotics at Blackmon Road Middle School, Volunteer, Columbus, GA

Sep. 2022 - Dec. 2022

- Mentored 9+ students in a middle school robotics program for 14+ weeks, ultimately leading them to achieve first place in Robot Design & Performance
- Reinvigorated a new robotics team after it had previously shut down earlier due to COVID-19
